

Emilio Quezada

Junior AI Engineer
Berlin, Germany

+49 177 705 6948

equezadanavarro@gmail.com

www.emilioquezada.com

Technical Skills

- **AI & ML:** GenAI, RAG, Agentic AI, LLMs, NLP, Multi Agent Architectures
- **AI Frameworks:** LLM Orchestration, LangChain, Model Agnostic API Integrations (OpenAI, Anthropic, Google Gemini), RAG Frameworks
- **AI Tools & Automation:** n8n, Cursor, Claude Code, Antigravity, ElevenLabs suite
- **Programming & DBs:** Python, SQL, PostgreSQL, Vector DBs (Chroma, Supabase)
- **Full-Stack & Web:** Flask, FastAPI, REST APIs, Web Security, Node.js, JavaScript
- **Cloud & DevOps:** AWS, Docker, Langfuse, CI/CD, Git, TDD

Soft Skills

- Problem Solving
- Critical Thinking
- Collaboration & Teamwork
- Attention to Detail

Languages

- Spanish (Native)
- English (C2)
- German (B1)
- Portuguese (B1)
- Japanese (A1)

Product minded Junior AI Engineer specializing in Generative AI, agentic workflows, and automation pipelines driven by tangible business logic.

Experienced in developing full stack applications and building RAG enhanced systems using Python, vector databases, real-time AI web search integrations, and observability tools.

Coming from a strong foundation in operational reliability and high volume data workflows, my goal is to bridge the gap between conceptual architectures and scalable, customer facing AI solutions deployed in live production settings.

Projects

RESONATE 🌱 | DEC 2025 - MAR 2026

[GITHUB](#)

- **Multi Agent System:** A 5 agent architecture for specialized tasks like sentiment analysis and music curation.
- **RAG Memory:** Conversational memory using LangChain, ChromaDB, and Tavily for real time web grounding.
- **Secure Deployment:** Fail closed toxicity screening layer and deployed the system using Docker and AWS.

Tech Stack: Python | LangChain | AWS | Docker | LangFuse | Multi Agent Architecture

MOVIEWEB APP | NOV 2025

[GITHUB](#)

- **Full Stack Architecture:** Multi-user application using Flask, SQLAlchemy, and SQLite, implementing clean Separation of Concerns and secure API key handling.
- **API Integration & CRUD:** Integrated the OMDb API for real time data, enabling complete CRUD functionality, efficient ORM queries, and personalized user views.
- **UI/UX & Workflows:** Responsive, retro style interface using Jinja2 templating, ensuring smooth user experiences, robust error handling, and reliable data workflows.

Tech Stack: Python | Flask | SQLAlchemy | SQLite | Jinja2 | REST APIs

MASTERBLOG - API | NOV 2025

[GITHUB](#)

- **API Architecture:** RESTful Flask API supporting full CRUD functionality, dynamic search, and sorting using an in memory data structure.
- **Web Security:** Strict rate limiting and CORS configuration using Flask Limiter and Flask CORS for endpoint stability.
- **Scalability & Design:** Frontend ready API with clean endpoint design, robust error handling, and JSON based responses.

Tech Stack: Python | Flask | REST APIs | Flask Limiter | Flask CORS

Experience

OPERATION MANAGER | PIRATE.COM | OCT 2018 - JUL 2025

BERLIN, DE

- **Strategic Rollouts:** Led a team of three Site Managers and fostered cross functional collaboration to align global strategic goals, successfully reducing regional implementation time for new product rollouts by 50%.
- **Operational Reliability:** Engineered and executed QA audit protocols and applied diagnostic troubleshooting to reduce fault tickets by 20% and consistently minimize technical downtime.

LOC AUDIO PROGRAMMER | ELECTRONIC ARTS | JAN 2016 - DEC 2017

MADRID, ES

- **High Volume Data Pipelines:** Executed rigorous QA and batch processing for high volume data validation across multiple AAA titles (including FIFA and Battlefield), maintaining precise quality standards for thousands of assets in 11 languages.
- **Technical Integration & Risk Mitigation:** Utilized Perforce (Version Control) daily for asset tracking and bug fixing, while proactively predicting and mitigating technical bottlenecks in complex production pipelines.

REAL TIME STREAMING SYSTEMS ENGINEER | NOISE OFF | MAR 2014 - JAN 2016

MADRID, ES

- **High Throughput Pipelines:** Developed an automated content assembly pipeline, utilizing batch processing to efficiently manage and standardize high volume digital assets for 900+ users annually.
- **Real Time System Reliability:** Directed end to end system configuration and rigorous pre testing of live broadcasting software, maintaining real time performance and quality standards in a high pressure environment.

Education & Certifications

- **Masterschool:** AI Engineering Training Program (Jul 2025 - Aug 2026)
- **AWS Certified Cloud Practitioner:** (August 2026)
- **DeepLearning.AI:** Agentic AI Certification (Feb 2026)
- **DeepLearning.AI:** Retrieval Augmented Generation (RAG) Certification (Feb 2026)
- **Codecademy:** Intro to OpenAI API Certification (Nov 2025)
- **Conservatori Liceu:** Bachelor's Degree in Music Performance and Composition (Sep 2008 - Sep 2013)
